...Buyer 1.

But auctions are only one way to match buyers and sellers. Another is
bilateral bargaining, better known as haggling. A buyer and seller, having
some knowledge of the market, enter into unstructured negotiation to find a
mutually acceptable **price**. If **negotiation** succeeds, an exchange is
made; otherwise, both try again with **another party**. Through a series of
negotiations, the market is cleared.

The most familiar mechanism to consumers is fixed-price lists. Sellers...

INTERNATIONAL ECONOMY: Japan and EU give push to trade round

FRANCES WILLIAMS

The Financial Times, London Edition 1 ED, P 12

Wednesday, March 28, 2001

DOCUMENT TYPE: NEWSPAPER; Stories LANGUAGE: ENGLISH RECORD TYPE: FULLTEXT

Word Count: 380

TEXT:

Japan and the European Union insisted yesterday that momentum for a new global **trade** liberalisation round was growing, after co-hosting a one-day meeting of senior **trade** officials from 20 rich and poor countries.

They said **many participants** favoured the launch of new **negotiations** at the World **Trade** Organisation's ministerial meeting in Doha, Qatar, in November, amid growing concerns over the threat of world recession and a return to **bilateralism**. However, EU and Japanese officials acknowledged that building broad support for a round among developing...

APPLICANT(s): OS PLANNING KK
APPL. NO.: 2001-227678 [JP 20011227678]
FILED: July 27, 2001 (20010727)
INTL CLASS: G06F-017/60

ABSTRACT

PROBLEM TO BE SOLVED: To provide a sales mediation server system for enabling a buyer to perform a transaction on advantageous terms by facilitating communication of intention between the buyer and sellers and simultaneously negotiating with a plurality of sellers in a so-called name-your-**price** auction using the Internet.

SOLUTION: When a user terminal 3 makes a purchase offer for an **item** desired to be bought to a server 1 connected to the Internet 2, a server 1 allows a seller terminal 4 to view a list of purchase offers. The seller terminal 4 selects purchase offers from the list to make a detailed page to be displayed, and makes a sales offer if a purchase offer with sellable conditions exists. The user/seller can freely publish and view messages on the page. Then, if the user agrees to the final sales conditions, the user decides purchase.

ABSTRACT

PROBLEM TO BE SOLVED: To provide a **product** selling system and a **product** selling method with which respective customers can obtain needs, business **negotiation** in buying a **product** or a place for information exchange

among **customers** with one **another** , without having to meet the person in charge face to face, when the customers have sufficient time.

SOLUTION: The customers can carry out 'quotation writing', '**price negotiation** ', 'request for special orders', 'Q and A' and 'information exchange' which are a plurality of pieces of 2nd **item** information, whenever the customers want to by performing user registration, acquiring an ID and a password and also downloading various programs for information exchange to their own computers.

ABSTRACT

PROBLEM TO BE SOLVED: To provide a value-added auction over plural online auctioneers.

SOLUTION: A method and a system are provided for a computerized auction for providing a value-added service to a bidder and a seller through an intelligent mediation agent capable of better matching of the bidder with an item. While using set bidding information, a mediation bidding agent intelligently offers a bid to auction. Similarly, a mediation auction agent intelligently puts an **item** for sale to various auctions. Such an agent works in place of **plural clients** and can execute an effective **negotiation** as well.

US 20030088494	A1	18	G06F-017/60	

US 20030088494 A1 18 G06F-017/60

Abstract (Basic): US 20030088494 A1

NOVELTY - The system has a multi-matching unit (552) to match a buyer request for quotations (RFQ) with a sellers bid records (900). Sell bid presentation and evaluation units (550,553) that presents and evaluates the sell bids to satisfy the **attributes** and business conditions to select the winning bid. Communication and transaction completion units **negotiate** and purchase the **product** by the winner.

DETAILED DESCRIPTION - The buyer unit has RFQ creation and submission unit enabling the buyers to create and submit RFQs with attributes and business conditions of preference. A RFQ receiving and storing unit enable a market place to receive and store the request in the database system and RFQ posting unit to post it to various potential sellers. The seller unit has a sell bid creation and submission units that creates and submits the sell bids with set of attribute values. A sell bid receiving and storing unit enables the market place to receive and store the sell bid values with attributes in the database systems. An INDEPENDENT CLAIM is also included for a method of doing business over a network.

USE - Used for online trading over a computer network.

ADVANTAGE - The system provides a shorten RFQ without sacrificing the effectiveness of trading mechanism and also allows the buyers to research the market without submitting RFQs to electronic market place that improves the efficiency and accuracy of the system.

DESCRIPTION OF DRAWING(S) - The drawing shows a block diagram of a business process with sell bid aggregation

Abstract (Basic): US 20030050869 A1

NOVELTY - A development system (402) receives commercial information related to a product content from a database (401) and transfers it to a product data management (PDM) hub (403-a) of a original equipment manufacturer (OEM) system (403). The hub processes aspects of commercial information to identify discrepancy and communicates the discrepancy to hubs maintained by contract electronics manufacturers (CEMs) (404-a,b,e).

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (1) data processing system;
- (2) data processing method;
- (3) product produced based on commercial information; and
- (4) computer readable medium storing data processing program.

USE - Product content collaboration tool for travel agency which provides an all-in vacation with services provided by restaurants, hotels, transportation companies and by individual guides and professional assistants. Also used for collaborative service provided between TV broadcasting station, Internet content broker, video-on-demand service. or another content service provider with subcontract parties such as network operators, content owners, electronic program guide services or set top box manufacturers.

ADVANTAGE - Effectively improves collaboration on commercial information and enhances **bilateral negotiation** between original equipment manufacturer (OEM) and contract electronics manufacturer (CEM). Thus, the product cost is reduced and product quality is improved.

DESCRIPTION OF DRAWING(S) - The figure shows a schematic view of the product content collaboration tool.

US 20030083911	A1		6 G06F-017/60	

Abstract (Basic): US 20030083911 A1

NOVELTY - The uniform resource locator (URL) information of a production data is provided to **several product suppliers** (18) by an e-service provider (15). A specific **product** supplier is selected by **negotiating** with the supplier. The selected supplier's request is logged by the e-service provider for audit purposes before allowing the supplier to retrieve the data for producing and supplying the ordered product to a customer.

USE - For ensuring audit integrity in electronic supply (e-supply) chain for producing and supplying product such as poster prints to customers through Internet, intranet and virtual private network (VPN).

ADVANTAGE - As the provider records the request by the supplier, unauthorized data retrievals are avoided. Ensures security by providing password access to the data items thereby preventing the production data being accessed by suppliers other than the selected one.

DESCRIPTION OF DRAWING(S) - The figure shows a schematic view of the e-service provision system.

Abstract (Basic): TW 507151 A

NOVELTY - The present invention provides a method for evenly allocating the network goods orders to multiple suppliers, wherein when a plurality of buyers are conducting on-line trading through the network, the database of the network server stores the information of a single or a plurality of united services or marketing, and the information comprises a plurality of supplier contact tables and the order information of the buyers, and the orders are alternatively and evenly allocate the suppliers' services or marketing in the plurality of suppliers, wherein the sequential information for evenly allocating the orders to **alternate** the **suppliers** ' services and marketing is the alternate services or marketing sequence for allocating the orders after the **negotiation** between the suppliers of the united services or marketing **goods** ; then, after ordering by the buyers, the sequence will be followed to allocate the order with one supplier's service or marketing goods to the buyer. The method includes the following steps: receiving the united services or marketing information; displaying the goods information for the buy's reference; and, processing the order to allocate a supplier's service or marketing goods.

Abstract (Basic): WO 200338732 A2

NOVELTY - Contingent commitment module enables users to formulate and submit sets of contingent commitments and tests those sets for logical consistency and syntactical correctness. The valuation module enables users to estimate the value of an arbitrary collection of assets, liabilities, or other quantities. The **negotiation** module enables two agents to **bilaterally negotiate** while protecting their **negotiation** strategy and allowing the agents to form a binding legal contract on the basis of the **negotiation**.

DETAILED DESCRIPTION - INDEPENDENT CLAIM included for the following:

- (a) system;
- (b) method for improving accuracy of a valuation estimate;
- (c) method for using a computer to conduct a **negotiation**;
- (d) managing commitments

USE - For computer systems.

ADVANTAGE - Increases the ability of agents to manage their commitments and to make safe disclosures of sensitive information.

KR 2002082583	A	1	G06F-017/60	

Abstract (Basic): KR 2002082583 A

NOVELTY - A method and device for a trade electronic commerce capable of negotiating a price is provided to purchase a commodity at low cost by discounting a purchase price regardless of a buyer when the total selling amount of a purchase commodity with respect to a single purchaser is more than predetermined selling amount and when the total selling amount with respect to a single commodity is more than a predetermined selling amount.

DETAILED DESCRIPTION - Contents are connected to a plurality of buyers(101) through an Internet network(300) includes trade transaction contents(111) for supplying a user authentication and a trade transaction service, and payment contents(113). A personal information database(121) stores personal information of many clients for authentication. A buyer database(123) stores a purchase commodity with respect to a single buyer, the total selling amount of a purchase commodity with respect to a single buyer, accumulated amount of money information, etc. A commodity database(125) stores prices according to amounts with respect to a commodity, the total selling amount with respect to a single commodity, a discount rate in accordance with the total selling amount with respect to a single commodity, and amount of stored goods. A plurality of sellers (131) are connected to the trade transaction web server(110) through an Internet network and produces commodities.

US 20030033239 A1 G06F-017/60 Provisional application US 2001280692

Abstract (Basic): EP 1246112 A1

NOVELTY - A request for quote (RFQ) is requested from a requesting trader and posted to one of the market participants. A price quote is received from the participant and a rule-based **negotiation** session is initiated based on the acceptance of the price quote by the trader. The **negotiation** session is policed for inappropriate transactions.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

- (1) **Bilateral** quote **negotiation** policing method;
- (2) Quote request distribution method;
- (3) **Bilateral** quote **negotiation** system;
- (4) **Bilateral** quote **negotiation** policing system; and
- (5) Quote request distribution system

USE - For **negotiating bilateral** rule-based quotes between potential buyers and sellers in electronic trading system using interactive user interface.

ADVANTAGE - Provides monitoring of **negotiation** session to deter unfair **negotiation** practiced by either the requesting trader or the market participant.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of the **bilateral** quote **negotiation** system.

JP 2002215939	A	14	G06F-017/60	

Abstract (Basic): JP 2002215939 A

NOVELTY - A calculating unit calculates the total used goods registered by the seller. A browsing unit displays the used **goods** list under specific classification and receives buyer's choice. If the **bargain** sale amount of selected **goods** equals the buyer's hope amount, then sale establishment is notified, else the application of **another seller** is provided to the buyer.

USE - Used goods agency system e.g. for pachinko machine, slot machine.

ADVANTAGE - As dealing with another seller is established in unsatisfied conditions, customer service efficiency is improved. Usage of network helps in easy model exchange transaction and enables to provide some reference information about model exchange and manufacturing planning, etc.

DESCRIPTION OF DRAWING(S) - The figure shows the structural drawing of agency device. (Drawing includes non-English language text).

US 20020065734	A1	10	G06F-019/00	

Abstract (Basic): US 20020065734 A1

NOVELTY - A processor (11) executes stored software program to establish a list of materials for a buyer (71). The serial number

provided by the buyer and the supplier (72) are matched and combined with information in the list and the supplier database, to generate a price enquiry list. Price quotation and order lists are generated based on the enquiry list.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for purchase information processing method.

USE - On-line business information processing platform.

ADVANTAGE - The information from multiple buyers are collected together to negotiate a better **price** with the supplier. The business information processing platform provides **price** enquiring quotation list automatically and quickly, since the **merchandise** provided by the suppliers is stored in the database on the platform.

DESCRIPTION OF DRAWING(S) - The figure shows the hardware structural diagram of the business information processing platform.

JP 2002149963	A	8	G06F-017/60	

Abstract (Basic): JP. 2002149963 A

NOVELTY - A management unit performs term management of goods by holding term information such as expiry date of goods to be purchased by consumer from a shop terminal through Internet (7). The information are transmitted to user terminal (4). If the goods are consumed by consumer, the consumer inputs the purport to user terminal. The consumption interval of goods is estimated based on input purport information, to notify goods with near term of expiry date to the user.

USE - In supermarket, departmental store, shop, etc., for supporting purchase goods by consumer.

ADVANTAGE - Eliminates forgetting of consumption term of goods by consumer. Prevents abandonment by expiration of purchased **goods**.

Enables purchasing **goods** efficiently, as consumption interval of **goods** is estimated by consumer. Enables supporting consumption action of **consumer** from **various** surfaces, as **consumer** acquires **various** useful information by linking with various information e.g. menu information, **bargain** sale **goods** information when purchasing **goods**

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of consumer support system. (Drawing includes non-English language text).

Abstract (Basic): US 20020046157 A1

NOVELTY - A buyer's intelligent **negotiation** agent (INA) transmits a buyer's initial query regarding a selected item, to a seller's intelligent **negotiation** agent. When the buyer's INA receives a response from the seller's INA, the buyer's INA engages in **negotiation**

with the seller's INA for procurement of the selected item.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

- (1) Automated procurement closing system;
- (2) Automated procurement system;
- (3) Automated procurement **negotiation** method;
- (4) Automated procurement closing method;
- (5) Automated procurement method;
- (6) Automated arbitrage system;
- (7) Automated arbitrage method; and
- (8) Computer program product for item procurement; and
- (9) Computer program product for automated arbitrage.

USE - Electronic sourcing, evolutionary computation-based data analysis and synthesis applications, artificial intelligence, marketing and financial services network integration, multivariate and **multilateral** interactive **negotiation** processes, item customization, mobility processes of intelligent **negotiation** agents (INAs), complex **negotiation** and auction approaches, bidding for products, aggregation and arbitrage capabilities for point-to-point electronic commerce using Internet.

ADVANTAGE - Services and bundles using dynamic pricing approaches thereby enhancing processing efficiencies and productivity.

DESCRIPTION OF DRAWING(S) - The figure shows the architecture of a cooperative communication network.

Abstract (Basic): KR 2002000675 A

NOVELTY - A method and a system for providing real-time/bidirectional e-commerce are provided to realize the purchasing transaction on an E-commerce site by both real-time intention exchange and bidirectional intention exchange.

DETAILED DESCRIPTION - First, a client system of a buyer accesses an E-commerce site provided in a web server of an E-commerce provider for buying a specific good. Then, the buyer searches the good information provided from the E-commerce site. Next, the buyer selects

a desired **good** from the E-commerce site. Then, the **price** of the selected **good** is **negotiated** by realistic intention exchange between the buyer and the provider. Therefore, the buyer can buy a required **good** at desired **price** through the **price** decision steps.

AU 200192665 A G06F-017/60 Based on patent WO 200223445

Abstract (Basic): WO 200223445 A2

NOVELTY - Several members define different prices for a same category of issues to be negotiated with the sellers (911) and offers the defined prices for consideration by the sellers. The seller respond individually to the members by providing counter-offer. The members accept the counter-offer from a seller, so as to satisfy specified requirements of the buyer (915).

USE - For executing group initiative for purchasing products or services such as office products, utilities, maintenance services, fuel, packaging, travel, waste removal, batteries, etc., over network such as internet, intranet, LAN, WAN, broadcast network.

ADVANTAGE - Allows buyer to keep the information confidential and buy exactly the desired product.

DESCRIPTION OF DRAWING(S) - The figure shows the customizable group initiative system.

NOVELTY - A system and method for negotiating price is provided to activate electronic commerce by adjusting a desired **price** for a **product** which a purchaser wants to buy and a manufacturing **price** for the **product**, thereby making an estimation sheet at the best **price** for the **product**.

DETAILED DESCRIPTION - A server system is installed in a web operator side capable of automatically adjusting price. A plurality of clients are connected through the server system and the internet communication network. The server system includes a web server, which operates a web capable of adjusting price on line, an application server, a mail server which manages mails and a database server. The database server includes data for adjusting **price** on line. The data includes information on **products**, companies, estimation sheets, and classifications of **products**, members, orders and so on. A user inputs and outputs information stored in the database server through the internet communication network.

JP 2002007765	A	30	G06F-017/60	

Abstract (Basic): US 20010056412 A1

NOVELTY - An intent transmitting unit sends the transaction intent of a buyer to a seller which provides the **goods** or services agreed upon by the **buyer**. A **second** data offering unit adds a precise **negotiation price**, which has not been offered to the **buyer**, to **second** offer data after the buyer sends the transaction intent.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (a) a transaction intermediary method;
- (b) a transaction intermediary system.

USE - For exchanging information between buyers and sellers including buyer-driven negotiations to achieve business transaction favorable to buyers.

ADVANTAGE - Allows seller to provide discount price only to specified buyers to maintain confidentiality, thus promoting membership of sellers in transaction system.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of intermediary server.

AU 200169820 A G06F-017/60 Based on patent WO 200198997

Abstract (Basic): WO 200198997 A1

NOVELTY - Communications from buyers (402-406) may be transmitted to a **first seller** via a **negotiating** room (401a). At least some of the communications may contain offers for the first **featured item**. A first flash demand curve may be produced for the first **featured item** using the offers for the first **featured item**. The first flash demand curve is provided to the **first seller** for receiving a modified **price** for the first **featured item** from the **first seller**.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for:

(a) a method for determining demand for **featured item** in an on-line group-buying sale

(b) a computer implemented method for processing communications between buyers and sellers in an on-line group-buying sale for a **featured item**

(c) a computer implemented method allowing buyers and at least one seller to communicate about at least one **featured item** offered in an on-line group-buying sale

(d) a method for determining a flash curve for a **featured item** offered by a seller in an on-line group-buying sale

(e) a computer implemented **negotiating** room system for communicating information between sellers and buyers associated an on-line group-buying sale having a **featured item**

(f) a system for communications during **negotiations** between buyers and seller in on-line group-buying sale for a **featured item**

(g) a computer readable data transmission medium

USE - For the expansion of group buying over electronic networks, such as the Internet, through a **negotiation** facility that allows greater communication among individual buyers and between buyers and **merchandise** sellers in conjunction with group-buying sales.

ADVANTAGE - Aggregates buyer demand for merchandise, provide enhanced, real-time communication among the members of buying groups and among aggregated buyers and sellers. Communicates information between a **first seller** and **buyers** in a **negotiating** room associated with an on-line group-buying sale having a first **featured item**. The **negotiating** room provides support for communications about the on-line group-buying sale among the **buyers** and the **first seller**.

DESCRIPTION OF DRAWING(S) - The drawing illustrates a sample negotiation room in an auditorium chat configuration according to an embodiment of the present invention.

Abstract (Basic): JP 2001250076 A

NOVELTY - A search unit (25) searches **goods** or service corresponding to buyer desired data specifying **price** range expected by buyer. A presentation unit (33) presents provision data specifying **goods** provided by sellers. Based on **negotiation** demand from **buyer** , **another** provision data is provided. Information about buyer's willingness to buy **goods** , is sent to seller.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (a) Negotiation transaction agency system;
- (b) Negotiation transaction agency method;
- (c) Recording medium containing negotiation transaction agency method

USE - For conducting negotiation between seller and buyer.

ADVANTAGE - Establishes transactions based on negotiation conditions, hence enables promotion of sales service and reduction in price.

DESCRIPTION OF DRAWING(S) - The figure shows the agency server.

Abstract (Basic): JP 2001202461 A

NOVELTY - A **seller** and **several buyers** connected to computers (100,110,120,200) participate in bidirectional **negotiation** about **price** of an objective **product** selected by the buyers, for a predetermined time. The seller performs bidirectional transactions with buyers, when **price negotiated** by buyer is more than final **price** designated to the **product** or less than or equal to initial stage **price**.

DETAILED DESCRIPTION - Several computers (100,110,120,200) to which buyers are connected, are connected with a center computer (420) through an internet (300). An INDEPENDENT CLAIM is also included for the bidirectional electronic commercial transaction execution device.

USE - For electronic commercial transaction system for providing goods and service to merchants and consumers.

ADVANTAGE - Effective bidirectional price negotiation between buyers and seller is performed in real time.

DESCRIPTION OF DRAWING(S) - The figure shows the electronic commercial transaction system. (Drawing includes non-English language text).

------------	---	--	----	-------------	--

JP 2001195495	A		33	G06F-017/60	
---------------	---	--	----	-------------	--

Abstract (Basic): GB 2358497 A

NOVELTY - A user is identified and registered icon which indicates information on goods or services is separated from an image including animation, sound or letters. The link between icons registered by different registrants is managed and the icon are dynamically registered or deleted for each user. The user selects an icon, so that the selected icon is displayed for each user in an individual on-line shopping environment.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (a) Individual on-line shopping environment generation method;
- (b) Computer readable recording medium;
- (c) Individual on-line shopping constructing apparatus;
- (d) Icon operating method;
- (e) Icon operating apparatus;
- (f) Computer program

USE - For electronic commerce such as on-line shopping, also for electronic chatting, electronic bulletin board, etc.

ADVANTAGE - Since the icon which represents information on goods or services can be registered or deleted based on user, on-line shopping is performed efficiently by organizing only information on good or services required for a user. Since user can update the information on **goods** or services with respect to an icon registered by **another user**, the quality and **quantity** of information distributed by an icon is enhanced. A link between different registrants is provided so that overlapping of information is prevented, and exchange of information between different registrants is promoted. The user can grasp and alter delivery status of **goods** purchased in the on-line shopping. Hence the delivery date and time of the **goods** can be obtained without **negotiating** directly with a home delivery person.

Abstract (Basic): JP 2001147977 A

NOVELTY - A purchase order presentation unit (18) shows input purchase order of goods and requirements of buyers (B1-Bn) such as applications and service of goods, to each seller (S1-Sm). A reply unit (20) inputs replies of each seller corresponding to the purchase order and requirements which are shown to buyers, by a reply presentation unit (24).

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for goods transaction assistance procedure.

USE - For supporting transaction **negotiation** between **several sellers** who sell **goods** and **several buyers** who buy **goods** through internet.

ADVANTAGE - Transaction negotiation between sellers and buyers is supported effectively. Since buyers requirements are shown to sellers along with purchase order of goods, and sellers replies are shown to buyer, even if the buyer has no knowledge related with the goods, he can purchase the goods simply corresponding to its requirements.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of goods transaction support system. (Drawing includes non-English language text).

AU 9964836 A G06F-000/00 Based on patent WO 200031607

Abstract (Basic): WO 200031607 A2

NOVELTY - The purchase information from several buyers are collected by the system. Based on purchase information, buyers are grouped into one or more subgroups. Then, system presents information in demand curve format for desired and maximum **price** offers to suppliers who decide selling **price** of **product** based on subgroups. The buyers are then notified of desired **price** corresponding to their respective subgroups.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for the transaction system.

USE - For conducting data communications for transaction **negotiation** over computer network such as internet for purchase of **goods** such as books, music and other electronic **products**.

ADVANTAGE - Reduction in **price** for **products** is achieved by grouping **multiple buyers** together in a single transaction.

DESCRIPTION OF DRAWING(S) - The figure shows flow chart depicting negotiation in transaction.

Abstract (Basic): WO 200000916 A1

NOVELTY - A database engine (14) utilizes the merchant character graphics data and the input data from a customer in order to generate responses to the input data according to merchant behavioral **attributes**. The occurrence of a sale for particular **goods** or services at a specific **price** is determined as a function of customer replies to merchant responses and merchant behavioral **attributes**.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (a) an interactive computer-implemented price negotiating method;
- (b) a computer program product.

USE - For **negotiating** purchases of **goods** or services over a distributed computer network e.g. Internet.

ADVANTAGE - Enables selling **goods** or services that have negotiable **prices** through distributed computer network. Enables user to hyperlink an eavesdropping screen where a user may observe a negotiation being carried out by another user.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of a distributed network environment.

Database engine (14)

Patent Details:

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
RU 2092368	C1		9	B62D-057/032	

Abstract (Basic): RU 2092368 C

A walking wheel, designed to **negotiate** sloping surfaces and steps as well as the flat, consists of a **multilateral** hub (1) fixed to a shaft (2) and equipped with equally-spaced cylinders (7) containing coaxial damping and thrust pistons with shoes (24), and equipped with by-pass valves (14).

The wheel also has distribution valves (13), additional piston cylinders and moving pins. The hub is in the form of two parallel plates which are joined together with a gap between, each having limiting slots for the moving pins which are fixed to rods in the additional piston cylinders. The working chamber of each of the thrust cylinders is in two sections, with damping pistons in the upper sections. The wheel is powered by the rotating shaft, which can be an i.c. engine, electric motor or manually operated.

ADVANTAGE - Simple in design and easy to maintain.

Abstract (Basic): DE 4323127 A

The conveyor has supporting frame with its vertical posts (6) and horizontal bars (7) and guidance channels (10,11) along both sides for the upper and lower strands (20,21) of the belt. The stators (12) of the linear motor are spaced apart along the outside (13) of each channel.

A longitudinal channel (14) on the inside accepts the supporting beam (16) of a guide (15) which is joined to the lateral edges (18,19) of the two strands with recesses into which the magnets (23) are fitted.

ADVANTAGE - Can **negotiate** sharp curves without thumping of belt on supporting rollers, and durability is guaranteed.

Claims

Claim

... a plurality of

147

I 0 seller's intelligent negotiation agents a request for a **bid** to sell at least one I I **item** , said request having a set of buyer-defined **attributes** minimally acceptable to said pool, said at least one seller's intelligent negotiation agent

submits that bid to said pool, said **bid** having a set of seller's **item** specifications for at least one available **item** for sale by at least one of a **plurality** of **sellers** associated with said **plurality** of **sellers** ' intelligent **negotiation** agents.

350. The system for cooperation of claim 349, further comprising:

I a cooperative communications...from an associated seller to I I sell at least one of a plurality of **items** and bundles comprising said common interest, each of said **plurality** of **seller** 's intelligent **negotiation** agents in

communication with said pool,

wherein, when said pool transmits to said **plurality** of **seller** 's intelligent **negotiation** agents a request for bids to sell all said **items** and bundles needed ...s intelligent negotiation agents a counter-offer to a bid from that seller's intelligent **negotiation**

agent.

150

363. The system for cooperation of claim 361 wherein:
said authority of each of said **plurality** of **seller** 's intelligent **negotiation** agents is to sell **items** and bundles different than that of the authorities of the other of said **plurality** of **seller** 's intelligent **negotiation** agents.

364. The system for cooperation of claim 361 wherein:
the procurement interest of each...penalty if said seller elects to sell said at least one of a plurality of **items** and bundles to **another** than said **buyer** .

375. A method for cooperation between pools of buyer's intelligent **negotiation** agents for procurement of an **item** using ...set of buyer-defined attributes minimally acceptable to a pool of cooperative buyer's intelligent **negotiation** agents, said set of buyerdefined attributes minimally acceptable to said pool for an **item** , said pool comprising a **plurality** of **buyer** 's intelligent **negotiation** agents having a common interest, said **item** one of a group of individual product items and individual service **items** , transmitting from at least one of a **plurality** of **seller** 's intelligent **II negotiation** agents to a neutral cooperative agent a set of seller's item specifications for said **item** , said **item** available from at least one of a **plurality** of **sellers** represented by said **plurality** of **seller** 's intelligent **negotiation** agents, transmitting from said neutral cooperative agent to said pool.

376. The method of claim...

...of seller's item specifications.

377. The method of claim 376, wherein:
said neutral cooperative **negotiation** agent transmits to said **plurality** of **seller** 's intelligent **negotiation** agents an acceptance responsive to said set of seller's **item** specifications.

378. The method of claim 375, further comprising:
registering each of said plurality seller...at least

168

one contract contingency authorizing a seller associated with said seller's intelligent **negotiation** agent to pay a penalty if said seller elects to sell said selected **item** to **another buyer** .

447. The method of claim 446, wherein:

said **bid** to said buyer's intelligent **negotiation** agent includes at least

one contract contingency authorizing paymerif of a penalty to said buyer's intelligent **negotiation** agent if said seller elects to sell said selected **item** to **another buyer** .

448. The method of claim 442, further comprising:

selecting one of a plurality of evolutionary...a set of buyer-defined attributes minimally acceptable to said pool for at least one **item** , said neutral cooperative **negotiation** agent receives from said **pluralityof seller** 's intelligent **negotiation** agents a set of seller's **item** specifications for at least one **item** available from at least one of a **plurality** of **sellers** associated with said **plurality** of **sellers** ' intelligent **negotiation** agents, said **item** selected from a list of individual **product items** and individual service items, and said

neutral cooperative negotiation agent submits said set of seller...

English Abstract

...commerce system and method for negotiating a price a network. The system comprises a a **negotiation** management server for controlling a series of functions for **price negotiations** between **first** and **second clients**; a **price negotiation** engine including a registration module for registering **goods** data and **negotiation** data, a **negotiation** progress module for progressing the **price negotiations** between the **first** and **second clients** and a calculation module for calculating the degree of **negotiation** intention; and a database server for storing information on sellers and purchasers, data on registered...

Detailed Description

... system and method for negotiating a price on a network, in which first clients register **goods** to be sold or purchased on a network and trade **prices** of the registered **goods** are decided by **price negotiations** between the **first clients** and **second clients**.

Background Art

Nowadays, with wide prevalence of computer systems and rapid development and spread of...and conditions between sellers and purchasers by deciding trade prices through I to I **price negotiations** between **first clients** who register **goods** to be sold or purchased on a network and **second clients** who wish to participate in the **price negotiations** for the registered **goods**.

Another object of the present invention is to provide a system and method which ...the negotiation management server and including a registration module for receiving and registering data on **goods** to be sold or purchased and data on a **negotiation** environment inputted from the **first clients**, a **negotiation** progress module for selecting any of the **second clients** which wishes to participate in the price

card.

17 The electronic commerce method as claimed in claim 6, wherein when the **second clients** input the **negotiation** data including a **goods** delivery term, a quality guaranteed term, returns conditions, payment means, or the number of the...

Claims

Claim

... to set a requirement of a
minimum number of satisfied relationships for use by said **negotiator** ,
Preferably, saidparty input unit is further opt@rable to permit oach
party to define weighting...an 1
currently within the scope of negotiations,
a first round manager, associated with said **item** manager, for managing
levelwise goal program, **negotiation** to successively reduce the number
of said **items**
mithin said scope to a predetermined threshold number of **items** ,
a **second** round manager, associated with said **item** manager, for
nianaging
levelwise program **negotiation** to produce successive offers, and
an **item** associator, Connected to said second round manager and to said
item manager, for expressing said...of received offers from said opponent
and carrying out value perturbations
in said directions,

said **negotiator** being operable to:

use Said optimizer to produce a **first** offer for a first level,
20

to advance from one level to another level only...expectation. Such a selection may succeed in balariciiiig the opponent party mathematically but produces, unrealistic **offers** .

Preferably, the negotiator carries out minimization for an expression comprising higher priority constraint variables and...the specific applicafion of matching a goal program of one party having a catalog of **items** , services, packages etc. and a **second party** who has a range of requirements that he hopes will be met fioin "*in the catalog. The figure shows an **item** catalog 92 for storing representations of the items for offer in the catalog. The items...Specifically, it includes facilities for suggesting, verifying, completing, evaluating, ranking, modifying and updating officers- Tere, **offers** may be multi- **item** , multi- **attribute** complex **offers** with various eonsiraints, preferences and trade-offs. The underlying assumption is that such constraints, preferences...e.g., a car catalog organized by 3 groups: luxury, sedan, 4X4). Within each family, **items** are listed according to their **attributes** . The awbutes am typically given in a discrete fashion (e.g., engine, size may be limited to a vector of 4 values 11 600, 1800 2000, 2400)), Each **item** in the catalog represents a specifiG vector of **attribute** values that are permissible for sale from the point of view of the seller, For...

...the relevant feasible intervals of the various aftributes, Mthout regard to whether or not an. **offer** corresponds to an **item** that actually exists in the catalog. At the socond stage, the seller's intention will ...

...is defined by a certain proportion by which the seller is ready to woTsen his **offers** . All **items** whose values, according to the seller's own objective, are Dot worse than the current...

...are generated through the ordinary GP procedures without regard to whether or not there are **items** in the catalog that actually correspond to these **offers** An each iteration, before sending his counter- **offer** ,, the seller finds the **item** in the catalog whose GP value is the closest to the one he has just...

...descending

order of utility to ilie buyer. Given the value of the seller's current **offer** according to the buyer's ob ective fiinction, all **items** whose imik position

j

is smaller then ...that was used to generate it.

The)argest profit is not necessarily associated with the **item** whose target **price** is the largest.

Theo the selleees UP in the first stage would look Ue this...

...deviations in engine size and color are not allowed for any of the seven pogsible **items** . These two represent fixed dimensions in ,the **item** 's **attribute** space that cannot be changed by negotiations.

Ap

. proach b: The seller constructs 3 sub...can be mounted only on American made

cars, The relevant coastr@t will be:

Trailerhook

type = Car.hook

@ **type**

The problem statement

In a multi- **item** deal there may be many combinations of items (from a collection of catalogs) that may...

...stage under the optimistic assumption that, within the given ranges of values for the relevant **attributes**, all possible **items** exist in their respective catalogs. Therefore, we actually perform qq catalog search during unification...

...Introduction

Negotiation proceeds in two stages. In stage 1 the seller operates with hypothetical **items** when **offers** are computed. However, when the seller presents an **offer** to the buyer, a concrete **offer**, based on actual catalog **items**, is presented. We shall explain how to locate such a concrete set of **items** for such a concrete **offer**. In stage 2 the seller only operates with concrete **items**. This is done either by (1) duplicating intention 1, at this point, -for each particular...whose value is "close enough to w" or until he finds that no such combination exists. **Offers** are generated only for valid combinations of **items** (car-trailer in our example; we assume that cars are more important than trailers),

0) Order...might be the purchase of a certain component by a purchasing officer. He knows, the **price** of the final **product** (P), the cost of labor (L), and the margin required by the firm (M). These...are evaluated by the auctioneer and in case of winning a bidder needs provide an **offer** that is at least as **good** as the level of achievement specified as the winning values in the auctioneer's value function. Observe that the winning bidder can always simply provide the **bid** he presented (which is as **good** or better from the auctioneer's point of view).

6) in case the auctioneer...of raising his offers, you in return increase the rate in which you decrease your **offers**. Alternatively, you can interpret his "**good will**" as a sign of weakness and be more stubborn. Consider the following example table...

Detailed Description

Detailed Description

... marketplace for all purchasing needs within a specific industry.
Auction Marketplaces allow multiple buyers to bid for products from individual suppliers whereas a Reverse Auction allows buyers to post their needs for a product or service and suppliers bid to fulfill the request for service. Catalog Aggregators centralize product catalogs from multiple vendors in a standardized format to facilitate product search and comparison with pre-defined prices and multiple features. Trading Exchanges are a forum for multiple buyers and suppliers with well defined products (normally commodities) that have high price volatility and require two-way negotiation.

The BBVRS includes a proprietary transactional payment platform supporting both United States and International clients...

Claims

Detailed Description

... of sale may enable sellers to increase sales by making knowledgeable
and effective pricing and **product offering** choices in real time based
on the specific preferences and sensitivities expressed by the group. In
addition, the ability to answer questions and respond to buyer
misconceptions about a **featured item** . at or near the point of sale
may increase sales and improve overall customer satisfaction...among the
buyers and the first seller. The method may further include receiving an
initial **price** for the **featured item** from the first seller and
initiating the on-line group-buying sale for the first **featured**

10

item after receiving the initial **price** from the **first seller** .
Buyer communications may be transmitted to the **first seller** via the
negotiating room, wherein at least some of the communications contain
offers for the **featured item** . at various **prices** . The method may
further include producing a first flash demand curve for the first
featured item .

using the at least some of the communications that contain offers for the first featured...for further aggregating demand among buyers and for supporting sales of one or more featured **items** by an on-line groupbuying mechanism by providing buyers and **sellers** with **various** comununication and **negotiating** tools.

Figure 4 illustrates a sample **negotiating** room 401 architecture, according ...negotiating room 401 may be a demand aggregation service provider 1 5 associated with the **featured item** , according to an embodiment of the invention. The negotiating room 401 may alternatively be operated by a seller or manufacturer of the **featured item** , according to an embodiment of the invention. Alternatively, the negotiating room 401 may be operated...honor any irrevocable offers in place. While these policies might hinder the flexibility of the **seller** to **offer different featured items** , they typically would not preclude the seller from improving the **bargain** to buyers by lowering price, adding accessories, extending warranties and the hke. In essence, the...

...buying sale, the seller may alter the featured item mix by adding and removing new **products** and services. Accordingly, a **seller** may run **several negotiating** room on-line group-buying sales to determine the appropriate mix of products/services to...

...room on-line group-buying sale provides the seller with a tool for testing various **featured item** mixes. and sales strategies with a real buying group.

The seller may then apply data...

Claim

... the at least one flash demand curve to create a sale demand curve for the **featured item** ; and
1 0 conducting a second on-line group-buying sale of the **featured item** using the sale demand curve.

9 The method of claim 8, further comprising:
conducting a...information between sellers and buyers associated with an on-line group-buying sale having a **featured item** , comprising:
a message receiver and transmitter configured to receive buyer communications and send the buyer...from set of message treatment formats.

66 A data processing system that provides communications between **buyers** and a **first seller** during an on-line group-buying sale for a first **featured item** , the data processing system including **negotiating** room software executable on the data processing system and configured to transmit communications from the **buyers** to the **first seller** , wherein at least some of the communications contain **offers** for the first **featured item** , the data processing system further configured to produce a first flash demand curve for the first **featured item** using the **offers** for the first **featured item** and configured to provide the first flash demand curve to the first seller.

Detailed Description

Detailed Description

... and services require significant negotiation between buyers and
sellers. These negotiations frequently include many other **attributes** of
the **goods** or services other than their **price**, such as the **type**,
quality and **quantity** of the **goods** being purchased, each of which may
1

influence the **price** of the **goods**. Negotiations also may require
multiple rounds of back-and-forth communication before the parties agree
on terms. Purchase prices are also influenced by market supply and
demand; **negotiations** may take into account the presence or absence of
alternative suppliers and purchasers.

Furthermore, sellers may explicitly package multiple **items** together,
such that the pricing terms for more popular items are more favorable if
purchased...for one or more inventory items from each proposal
independently from the other proposed inventory **items**.

The buyer may also choose to electronically **negotiate** one or more
inventory **items**

through the electronic commerce system. For each inventory **item** being
negotiated, the buyer and **seller** may **negotiate multiple**
attributes such as price,

6

quantity, classification, and quality, among others. For example, in the
broadcast...

...program rates to maintain the correct overall ratio.

Because the buyer can view proposals from **multiple sellers** in
response to the same request for proposal, the buyer can compare similar
inventory **items** from **different sellers** and **negotiate** only those
inventory **items** from each seller that best meet the buyer's criteria.
Furthermore, because the proposal was determine which inventory **items**

to negotiate, and the appropriate values to counter- **offer** .
When the seller receives a counter-offer from the buyer, the seller may accept the...of purchase transactions I 1 00, III 0 on which a particular buyer is currently **negotiating** or ordering.

Referring again to FIG. 1, because the **items** that must be displayed to each **user** are **different** depending on their current transactions, the application server 60 also contains the program logic that...

...be running different instances of particular session beans, but all database accesses for a particular **type** I 0 of data **item** are forced to go through the same entity bean. When the JSP processor program has...

Claims

Claim

... supplier for purposes of another and vice-versa. Moreover, depending upon the semi-fungible commodity **items negotiated** fo'r, a complex **negotiation** can even result in a single entity being a purchaser and **supplier** for **different items** in the same **negotiation**, for example, to where one of the **items** is used in the production of or is a subcomponent of **another item**.

PURCHASER/ **SUPPLIER** KNOWLEDGE OF EACH OTHER

One factor which can affect any **negotiation** is the knowledge the parties involved in the **negotiation** have about each other. In some cases, this knowledge can result in the parties negotiating...

...is presented in the negotiation as two or more purchasers having differing semi-fungible commodity **item** requirements; or e) a supplier **offering** two or more different semi-fungible commodity **items** is presented as two **different suppliers**.

10 **PRODUCT PURCHASER INTERFACE**

When a purchaser agrees to participate in the **product negotiation** they are given access to an aggregation server and are presented with an interface that...this example, the supplier has provided historical information regarding revenues for the semi-fungible commodity **item** being **bid**. As a result, the system calculates that the current volume would result in an estimated...

...upon the particular implementation, and/or possibly the product category for the semi-fungible commodity **item**, some of the information illustratively shown in the Preferred Supplier **Bid** Screen 800 of FIG. 8 may also or alternatively be present in the Supplier Bid...upon the particular implementation, and/or possibly the product category for the semi-fungible commodity **item**, as with the Preferred Supplier **Bid** Screen of FIG. 8, some of the information illustratively shown in the Preferred Supplier Bid...

...there are three purchasers (A, B and C) who all have needs for the same **product** class (but not necessarily the same **type** within the class). Their volume needs are also different. A needs 5000 units, B needs...

...Request For Proposal (RFP) for that semi-fungible commodity (inverted exclamation mark)tem **product** class and/or **type** submittted to the entity hosting the negotiation. In each RFP, each purchaser defines the general...

...unit for product "Q".

Y- \$110/unit for product, 'T', and

Z: \$120/unit for **product** "K". - 23 Based on these' **prices** each Purchaser allocates their volume needs as shown in Table 1:

Purchaser Volume Supplier X...

...or 40%, and Z sees an initial award of 1000 units or 10%.

Assume that **product** "K" **bid** by supplier Z is of a higher quality or is materially different **product** which justifies a **price** premium over the **products** **bid** by suppliers X and Y. Nevertheless, supplier Z is not happy with being awarded only...

...is reflected on each purchaser's screen so that each purchaser will see the new **price** of \$115/unit for **product** "K" from Supplier Z. As a result, at least one of the purchasers decides to...utility values can be obtained using the line. Once the slope has been obtained, reference **prices** for the other **products** may be obtained using the one reference **price**, the utility values and the calculated slope. In addition, each purchaser is typically prompted as...

...at the start of the negotiation t, the purchaser will also see the current suppliers' **offering price** 1202, 1204, 1206 for each relevant **item** 12081 12105 1212 in the negotiation represented as superimposed points, such as illustratively shown in...at time t, the best value for

money, according to this purchaser's preferences, is **item A** because the **price** (shown by the pentagon) is on the utility function curve, whereas the price for (inverted exclamation mark) **item B** is significantly above the curve and the **price** for **item C** is just: above the curve. Consequently, the purchaser should allocate the entire volume to...

...graphical output of the decision making tool feature. As the negotiation progresses, suppliers adjust their **prices** so that, as shown in FIG. 13, at time t , **products A, B and C** have each been **offered** at lower **prices** 13023 13043 1306. Since the utility function curve 1000 represents the purchaser's preferences, its...

...does not represent a bad value for money, the purchaser can maintain volume allocation to **item A**. FIG. 14 is an example **price** vs. utility graph. As shown, there are three **products F, Q and R** whose price and utility points (42, 57), (655 83) and (100, 100) have been normalized to a...

...more economically advantageous decisions. Moreover, the decision can be based upon the allocation to the **items** that best match the utility/**price** profile of that particular purchaser. Having shown, by way of several examples, utilization of decision...

...though the supplier who would view the display of FIG. 17 would not know the **product** or pricing **offered** by the competing suppliers, the supplier can

nevertheless make empirical judgments. For example, assuming supplier...c
50 60 20

Table 10

Each purchaser is then prompted to enter the maximum **price** they would lo pay for one of the other **products** if the highest utility product cost 100 units. By way of example, assume that each...

...price-utility pairs, the system calculates the slope of the line passing through the two **price** -utility pairs and values for any remaining **products** for each purchaser based upon the linear function. This is illustrated graphically in Figures 18A...negotiation method comprising: engaging at least two purchasers and at least two suppliers in a **negotiation**

session,

receiving, from a first of the at least two **suppliers**, a **first bid** of a first

product from a semi-fungible **product** category at a first **price** ; receiving, from a second of the at least two suppliers, a second **bid** of a lo second **product** from the semi-fungible **product** category at a second **price** ; allowing at least one of the purchasers to individually specify, via an on-line...

...by a

processor:

a) receives, from a first of at least two suppliers, a first **bid** of a first semi-fungible **product** at a first **price** ;

b) receives, from a second of the at least two suppliers, a second **bid** of a second semi-fungible **product** at a second **price** ;

Detailed Description

... of 1000 buyers.

FreeMarkets utilized an "open cry" reverse auction to drive pricing down among **multiple** competing **suppliers** of a given **product** or service. The typical pre- **negotiation** present in the FreeMarket system is whether a supplier will participate. In other words, prices bid by suppliers are determined in "real time." However, FreeMarkets only allows negotiations on **price** alone-

the
other terms for the provision of the **goods** or services are not
negotiable.

However, with the low volume and the lack of aggregation...

said request includes a set of customer-defined **attributes** particular
to said selected
item ,
maintaining a plurality of sets of vendor-defined **item features** , each
said set of vendordefined **item features** associated with a plurality
of **items** available for sale by a vendor, and processing a comparison of
said customer-defined **attributes** with said vendor-defined **item**
features for responsiveness to said request.
264. The method of claim 258 including:
obtaining said detailed...

...third party information vendor.
265. The method of claim 258 including:
receiving from said purchaser **features** desired in a **product** or
service **item** .
266. The method of claim 258 including:
receiving from said purchaser a selection of product...selected item,
92
program code for obtaining at least one bid to sell said selected **item**
from at least one
of a **plurality** of **vendors** ,
I I program code for submitting said bid to said purchaser, and
program code for processing an interactive bidding **negotiation** between
said purchaser 1 3 and said vendor in response to said submission of said
...

...features for responsiveness to said request,
receiving at least one bid to sell said selected **item** from at least one
of a **plurality** of
vendors ,
sending said bid to said purchaser, and 1 5 processing an interactive
bidding **negotiation** between said purchaser and said vendor 1 6 in
response to submission of said bid...designed for submitting to said
purchaser node at least one bid from one of a **plurality** of **vendors** to
sell said selected **item** and for conducting an interactive bidding
negotiation between said purchaser and said vendor in response to I I
submission of said bid...

...said
selected item,
program code for receiving at least one bid to sell said selected **item**
from at least one
of a **plurality** of **vendors** ,
I I program code for submitting said bid to said purchaser, and

program code for processing an interactive bidding **negotiation** between said purchaser 1 3 and said vendor in response to submission of said bid ...between said 1 8 purchaser and said seller.

I -3) 5 2. The computer program **product** of claim 351 wherein: said bidding negotiation is conducted between said purchaser and a plurality of **sellers** , and said bidding **negotiation** is accessible to said purchaser and to each of said **plurality** of **sellers** .

105

3 53. The method of claim 352 wherein: said bidding **negotiation** is accessible to said purchaser and to each of said **plurality** of **sellers** .

354. The method of claim 318 including: facilitating said **negotiation** by providing direct communication between said purchaser and any one of said **plurality** of **sellers** for **negotiations** between said purchaser and said any one seller.

355. The method of claim 13 including: said **negotiation** including revisions to terms, said terms comprising **price** , **item features** , and **item** quality.

Detailed Description

Detailed Description

... operator of its compensation. In ordinary systems such as eBay.com, the value of the **goods** is relatively small and each **item** is usually **bid** upon by **several bidders**.

Thus, there is little incentive for a buyer and seller to go outside the system to **negotiate** a final **price**. If the **goods** were relatively high **priced** and the number of bidders at any time were only one, then such incentive would...system is implemented on an Internet accessible website and provides search engine capability for locating **items** of interest and for identifying buyers and **sellers** of **various items**.

The system allows for different pricing options, such as fixed pricing, **negotiated** pricing and auction pricing. There is also provided a work flow tool to manage each...

Detailed Description

... annual membership with some nominal membership fee. Second, the membership allows the member a lower **price** on all the **products** carried by the Club-- that is, typically there is a **price** advantage over non-members for all **products**. Next, though a particular **product** may be offered by multiple vendors, the members do not get directly involved in negotiating with a particular vendor-- the Club negotiates the discount and each member decides whether he would like to buy the **product** or not at the stated **price**. Finally, since the negotiation is done directly by the Club, the members typically do not (and, indeed, have no reason to) coordinate their activities to decrease the **price** they pay for a

1

SUBSTITUTE SHEET (RULE 26)

product. Thus, purchasers taking advantage of the available buying clubs are locked into a pre-defined arrangement and have no direct input into the choice of **products** offered or the discount available, nor are they able to coordinate their choices with other buyers...has an opportunity for volume discounts based on how many other people bid for the **product**. Next, there is no intermediary or other entity that negotiates on behalf of the buyers. Multiple vendors may offer the same **product** and buyers place a bid with different vendors. The aggregation of their orders with a specific vendor as opposed to another vendor is the forum by which buyers directly negotiate how they wish to purchase a particular **product**. Finally, since the final **price** paid

for a
product depends entirely on the action of the temporary buying
community
that is created online, there...

Abstract: Our approach for automating the **negotiation** of business contracts proceeds in three broad steps. First, determine the structure of the **negotiation** process by applying general knowledge about auctions and domain-specific knowledge about the contract subject along with preferences from potential buyers and sellers. Second, translate the determined **negotiation** structure into an operational specification for an auction platform. Third, after the **negotiation** has completed, map the **negotiation** results to a final contract. We have implemented a prototype which supports these steps by employing a declarative specification (in courteous logic programs) of (1) high-level knowledge about alternative **negotiation** structures, (2) general-case rules about auction parameters, (3) rules to map the auction parameters to a specific auction platform, and (4) special-case rules for subject domains. We demonstrate the flexibility of this approach by automatically generating several alternative **negotiation** structures for the domain of travel shopping in a trading agent competition. (24 Refs)

Abstract: Supply chain formation presents difficult coordination issues for distributed **negotiation** protocols. Agents must simultaneously **negotiate** production relationships at multiple levels, with important interdependencies among inputs and outputs at each level. Combinatorial auctions address this problem by global optimization over expressed offers to engage in compound exchanges. A one-shot combinatorial auction that optimizes the reported value of the bids results in optimal allocations with truthful bids. But autonomous self-interested agents have an incentive to bid strategically in an attempt to gain extra surplus. We investigate a particular combinatorial protocol consisting of a one-shot auction and a strategic bidding policy. We experimentally analyze the efficiency and producer surplus obtained in five networks, and compare this performance to that of a distributed, progressive auction protocol with non-strategic bidding. We find that producers can sometimes gain significantly by bidding strategically. However, when the available surplus is small relative to the consumers' values, the producers' strategic behavior may prevent the supply chain from forming at all, resulting in zero gains for all agents. We examine the robustness of the combinatorial protocol by investigating agent incentives to deviate, identifying quasi-equilibrium behavior for an example network. (19 Refs)

Abstract: We present an extensive breakdown of the auction design space that captures the essential similarities and differences of many auction mechanisms in a format more descriptive and useful than simple taxonomies. This parametrization serves as an organizational framework in which to classify work within the field and uncovers parameter combinations corresponding to novel mechanisms. The structured characterization of auction rules can be exploited for the modular design of configurable auction servers. It also facilitates the communication of auction rules to

software agents, enabling the automation of flexible market-based **negotiation**. (48 Refs)

Treatment: Practical (P)

Abstract: Gives a new approach for automating the **negotiation** of business contracts. We use a declarative language for expressing and reasoning about contracts and **negotiations**, which we extend to include a knowledge base of rules about **negotiation** structures and auctions. We address three research questions. (1) How can we represent information to allow automatic inference of **negotiation** structures? (2) How can we automate **negotiations** in a way that closely drives a realistic automated platform? (3) How can we use auction results to form a final contract? We use courteous logic programs as a way to express fully- and partially-specified executable contracts. We have developed concepts and vocabulary to reason about: (1) high-level knowledge about alternative **negotiation** structures, (2) general-case rules about auction parameters, (3) rules to map the auction parameters to the Michigan Internet AuctionBot, and (4) special-case rules for specific domains. By performing inferencing on the rule sets and interfacing to our auction server, our prototype is able to automatically configure a set of auctions, the results of which "fill in the blanks" of a partial contract. We use a trading agent competition as an example domain and are able to automatically generate all the auctions used in the competition, starting from a formal description of the competition domain. The result of this project is an extended approach which allows both the automation of the **negotiation** process, includes conducting of auctions and produces contracts with are themselves executable using rule-based techniques. Abstract: In a distributed multiagent **negotiation** involving multiple issues, it is often desirable to finalize deals only when all related issues are resolved. However, detecting that a multiagent **negotiation** has reached a globally quiescent state can be a nontrivial task in a distributed, asynchronous system. We present a quiescence detection protocol based on the Dijkstra-Scholten algorithm for distributed termination detection (D.W. Dijkstra and C.S. Scholten, 1980). The protocol operates as a layer on top of an underlying mediated **negotiation** protocol. If agents conform to the detection protocol, the detection process terminates iff the **negotiation** is quiescent. We discuss agent incentives to deviate from the protocol, and describe extensions that enforce adherence with respect to the most significant potential deviations. (12 Refs)

Abstract: The University of Michigan Digital Library is a large-scale confederation of software agents, providing library content and services to users and each other within a distributed network environment. Allocation of resources and activities to the various agents is determined through a market-based **negotiation** process, where agents tender offers to buy or sell services, basic resources, and other information goods for specified prices. Generalized auction modules resolve these offers into deals among agents. Viewing each agent as an information consumer or entrepreneur, the digital library as a whole constitutes a virtual economy of information goods and services. (18 Refs)

Abstract: The World Wide Web's growing popularity is changing the nature of libraries. Digital libraries offer a huge range of multimedia information-everything from movies, speeches, images, and photos to sounds, text, and beyond. The amount of on-line material is exploding, and the infrastructure for locating and accessing material improves almost daily. With so much and such a wide variety of information available, the problem is changing from simply locating related information to locating the most relevant information efficiently and cost effectively. In building the next generation of digital libraries, artificial intelligence will play several important roles. First, the multimedia nature of digital libraries will require moving beyond simple keyword lookup of information to much more advanced document-processing capabilities in which the system analyzes the content through text analysis, image processing, and speech recognition. Second, the availability of such a huge amount of information will require advances in the infrastructure for organizing and accessing information. A promising approach to this problem is the development of information agents. These agents can provide a variety of services-such as searching, retrieving, filtering, and **negotiating**-that reduce the burden on the information user or provider. Researchers from several of the major digital library projects present their vision of AI's role in building digital libraries. (1 Refs)

Abstract: Exploiting the Internet for commercial benefit has become a key theme for chief information officers (CIOs) at most organizations. Web-based **auctioning** is a rapidly expanding application of the Internet. The matching of demand and supply at the best **price** at one specific point in time is the additional benefit of a Web-based **auction**. The advantages, however, must be considered against lower switching costs for **auction** participants. Are **auctions** always beneficial to the company? In particular, which technical and business arrangements must the CIO satisfy to give the organization a lasting advantage in this new field of electronic commerce? The following **types** of Web-based **auctions** can be distinguished: Web-based sales **auctions** (one seller **offering** to as **many** **buyers** as are allowed into the **auction**), Web-based procurement **auctions** (one buyer rendering his procurement needs from **many** **sellers** via the Internet); and Web-based many-to- **many** **auctions** (**many** **suppliers** **offering** to **many** potential **buyers**). These are distinguished from one-to-one **negotiations** using EDI. (5 Refs)

Intelligent agents for e-commerce applications
Author: Vuppala, Krishna
Degree: Ph.D.
Year: 1999
Corporate Source/Institution: Illinois Institute of Technology (0091)
Adviser: V. C. Ramesh
Source: VOLUME 61/01-B OF DISSERTATION ABSTRACTS INTERNATIONAL.
PAGE 453. 75 PAGES

Descriptors: ENGINEERING, ELECTRONICS AND ELECTRICAL ; COMPUTER SCIENCE
; ENERGY

Descriptor Codes: 0544; 0984; 0791

This thesis focuses on development of intelligent agent solutions for e-commerce applications. E-Commerce has several complexities like: lack of information about the players, learning the nature of one's business partners/competitors, finding the right business partner to do business with, using the right strategy to get best profit out of the **negotiations** etc. The agent models developed can be used in any agent solution for e-commerce. Concepts and techniques from Game Theory and Artificial Intelligence are used. The developed models have several advantages over the existing ones as: the models assume the non-availability of information about other players in the market, the models of players get updated over the time as and when new information comes about the players, the **negotiation** model incorporates the patience levels of the players and expectations from other players in the market. Power industry has been chosen as the application area for the demonstration of the capabilities and usage of the developed agent models. Two e-commerce scenarios where sellers and buyers can go through the power exchanges to bid in **auctions**, or make **bilateral** deals outside of the exchange are addressed. In the first scenario agent helps market participants in coordinating strategies with other participants, bidding in **auctions** by analyzing and understanding the behavior of other **participants**. In the **second** scenario, called "Power Traders Assistant" agent helps power **trader**, who buys and sells power through **bilateral negotiations**, in **negotiating** deals with his customers.

Descriptors: OPERATIONS RESEARCH ; ENGINEERING, INDUSTRIAL ; MASS
COMMUNICATIONS ; COMPUTER SCIENCE

Descriptor Codes: 0796; 0546; 0708; 0984

This dissertation investigates commercially feasible automated **negotiation** in electronic commerce. Three **types** of automated **negotiation** are investigated: automated **bargaining**, the online **auction**, and the online broker. A three-layered framework explains why multi-dimensional automated **bargaining** is not currently possible with existing electronic commerce technology. The framework also explains why automated **price negotiation** through the online **auction** is a thriving sector of electronic commerce, and why, despite some difficulties, online brokered marketplaces are partially feasible.

An overview of online **auction** activity during 1997-1998 is presented, and different business strategies are outlined. Within the framework of the online **auction**, a novel Markov chain model of the progression of the **price** vector of an online **auction** is presented. Extensions to multiple-item **auctions** and applications to dynamic

inventory management are also given. The predictions of the model are compared to the results of actual online **auctions** , using data from a leading online **auctioneer** , Onsale, Inc.

The online brokered marketplace is also investigated. Using a continuous double **auction** as the matchmaking mechanism, a simulation of a dynamic brokered marketplace is created. This marketplace is used to investigate the effect of search costs and brokerage fees upon marketplace dynamics. A key finding is that when search costs are moderate, the online broker executes the most transactions, yields the highest sale **prices** , and can charge the highest brokerage fees.

To summarize, automated **negotiation** in electronic commerce is an emerging business phenomenon which is, in places, highly quantitative. Online **auctions** and online brokerages **offer** buyers, **sellers** , and middlemen **many** more degrees of freedom than do traditional channels, and hence new optimization problems arise. This dissertation applies the tools of operations research to help better understand and manage the online **auction** and the online broker.

This dissertation analyzes the additional efficiency gains made possible by **multilateral trade negotiations** compared to a network of **bilateral** ones and the significance of their institutional framework.

In Chapter 2, we show that the **multilateral negotiations** provide efficiency gains through the enlargement of the payoff space in a general **bargaining** framework. The first source of gains arises from providing superior outcomes in a market (for tariffs) with a large number of **participants** . The **second** source results from internalizing the negative externalities that **bilateral** agreements impose on third parties.

In Chapter 3, we argue that the institutional framework of the GATT regime, specifically the reciprocity, unanimity and the MFN principles, enabled the members to reach and sustain efficient outcomes. Reciprocity requires mutual lowering of **trade** barriers and the specific reciprocity rules lead to unique efficient outcomes. Unanimity is necessary to exploit the first source of efficiency identified in Chapter 2. However, at any efficient outcome, a pair of countries have the incentive to renegotiate their respective tariff rates due to **trade** diversion effects. This can undermine the whole system but the MFN rule takes away this motivation and guarantees the stability of the system.

In Chapter 4, we employ a formal **bargaining** model to analyze sequential **bilateral negotiations** . We identify three distinct sources of inefficiencies due to the inability to internalize all externalities. The introduction of the MFN rule in a **bilateral** setting eliminates one

source while simple **multilateral negotiations** eliminate two. However, depending on how the surplus is divided, the third inefficiency can still prevent the socially optimal outcome from being implemented. We show that this can be achieved in simultaneous **multilateral negotiations** with the MFN rule.

In Chapter 5, we show that the repeated nature of the **trade** relationship can overcome unilateral incentives to deviate in **negotiations** through punishment mechanisms, but it is impossible to deter all coalitional deviations simultaneously. The MFN rule eliminates these incentives and leads to sustainable Pareto superior outcomes. The commitment to the MFN rule has been historically established through a costly reputation mechanism employed by the dominant powers. We provide further historical evidence to support above arguments.

THREE ESSAYS IN APPLIED MICRO-ECONOMIC THEORY (AFTER HOURS MARKET, TRANSITION ECONOMIES)

Author: BELCOURT, TRACEY LYNN

Degree: PH.D.

Year: 1997

Corporate Source/Institution: QUEEN'S UNIVERSITY AT KINGSTON (CANADA) (0283)

Adviser: DAN BERNHARDT

Source: VOLUME 58/09-A OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 3644. 139 PAGES

Descriptors: ECONOMICS, FINANCE ; ECONOMICS, THEORY

Descriptor Codes: 0508; 0511

ISBN: 0-612-20552-5

This thesis observes some real world phenomena and applies micro-economic theory to capture the underlying economic forces driving it. For the most part, the methodology of non-cooperative game theory is used to formally model and illuminate the hidden issues of our observations and, hopefully, enable us to better understand the rationale behind economic agent's actions and the likely outcomes of their transactions. We investigate three distinct phenomena.

The first chapter explores the consequences of augmenting, as did the NYSE, a standard dealership market with an after-hours market, in which, all **trade** orders are crossed at a single **price**. **Trade** in the after-hours may be attractive because if an order is executed, it may be executed on the 'right' side of the **bid**-ask spread. Notwithstanding this, levels of after-hours **trade** observed on the NYSE have been very unimpressive. We provide a theoretical explanation for this lack of **trader** interest.

The second chapter models the evolution of enterprise in transition economies. In an environment with no institutional contract enforcement mechanisms and short-lived agents, inter-firm supply relationships are tenuous. Myopic agents in an input supply firm have little incentive to fulfill contract terms, so that, most enterprises do not rely on other firms for supply. The incentive compatible scale at which a firm can rely on one another for supply inputs is so small that feasible firm interactions are inefficient. As a result, there is an initial over-abundance of retail and service firms with simple one-stage production processes, and of the industries that do require intermediate goods in production the most successful ones vertically integrate. We formally model

these observations and propose a model of future development of enterprise.

The third chapter investigates the claim in input supply contracting that procurement goods are often over- **priced** and their high costs are sustained by sole-source contracting arrangements, and that utilizing more than one seller can generate considerable **price** reductions. One would believe that the buyer's **bargaining** power would be greatest in the **many seller** case. However, we demonstrate that despite the potential improvement in **bargaining** position, costs can still increase as the number of suppliers increase, if the quality of the input, such as an experience good, can only be determined after production. Furthermore, if dual sourcing is mandatory, say by a policy rule, then socially inefficient outcomes may occur. (Abstract shortened by UMI.)

DEMAND MANAGEMENT: A DEMONSTRATION OF THE COMPARISON OF PRICE AND DUE DATE NEGOTIATION STRATEGIES USING SIMULATION

Author: MOODIE, DOUGLAS ROME

Degree: PH.D.

Year: 1996

Corporate Source/Institution: SYRACUSE UNIVERSITY (0659)

PAGE 2293. 701 PAGES

Descriptors: BUSINESS ADMINISTRATION, MANAGEMENT ; BUSINESS
ADMINISTRATION, GENERAL

Descriptor Codes: 0454; 0310

This dissertation considers the problem of demand management in a firm where a firm's historical delivery service level reputation influences the number of quotation requests from its potential customers. There is also a **trade** -off between net **price** and due date for each job for both the customer and the firm. The demand manager can **bargain** with the customer over **price** and a promised due date. **Bargaining** finishes with the customer either agreeing to a **price** and delivery date, or refusing the firm's **bid** and placing the order elsewhere. The firm's objective is to maximize its long term net revenue.

The firm's demand management **negotiation** strategy guides this **bidding** process. This research demonstrates the use of simulation to test different **negotiation** strategies for different market and company conditions. A demand management **negotiation** strategy consists of several parts: the due date estimation method, the **bargaining** approach, the minimum target **price** rates, and the uncertainty allowance used in generating the firm's proposed due dates. This simulation models a job shop model of five workstations with random routing and operation processing times.

This demonstration first develops sixteen scenarios to test different demand management **negotiation** strategies. This investigation compares finite scheduling based due date estimation methods, as well as the more traditional parameter based methods. The results illustrate that such a comparison can give useful guidelines. The preferred due date estimation methods for this evaluation are the classical methods which use parameters. The results show that the most common method, using the **customer's first** due date, is inferior to other methods. Full **negotiation** over both **price** and due date is the preferred **bargaining** approach.

The research concludes that firms should carefully evaluate their **negotiation** strategies, as using the wrong due date estimation method,

bargaining approach, target **price** rates, or uncertainty allowance will affect revenue. The dissertation shows that simulation can be used to evaluate **negotiation** strategies easily.

PAGE 541. 93 PAGES

Descriptors: ECONOMICS, THEORY

Descriptor Codes: 0511

This dissertation consists of three independent essays on **auctions** and **bargaining**. Chapter 1 overviews the literature on **auction** and **bargaining** theory and puts this dissertation into broader perspective.

Chapter 2 analyzes **auctions** with multiple objects. Actual values for the objects are determined by private signals multiplied by public ones. Private signals are one dimensional and are assumed to be i.i.d. across bidders. Public signals are common knowledge and differ among objects. The **auction** mechanism that maximizes the seller's expected revenue is characterized. Both a sequential sealed- **bid** first- **price** and a second- **price** **auction** can implement the optimal **auction** mechanism when and only when the most valuable object is **auctioned** off first. The pattern of the **price** paths is also analyzed.

Chapter 3 examines the formation of coalitions when multiple homogeneous objects are up for **auction**. Coalition members hold a "pre- **auction** " to allocate the rights to participate in the main **auction** and winners in the pre- **auction** and all the non-coalition members compete in the main **auction**. It is shown that there exist interim individually rational, interim incentive compatible, and ex post budget balancing pre- **auction** mechanisms in which the grand coalition forms at equilibrium. The seller's optimal reserve **price** is characterized. Further, it is shown that the seller always prefers a sequential to a simultaneous sealed- **bid** second **price** **auction**.

Chapter 4 studies an extension of Rubinstein's 2- **person** **alternating** **offer** **bargaining** game to the n-person case. The models are based on a new interpretation of Rubinstein's game, where, each player demands his/her own share from the succeeding player according to the predetermined order of the players, and exits the game if it is accepted, or moves to the end of the line if it is rejected. A unique and efficient subgame perfect equilibrium exists.

THREE APPLICATIONS OF GAME THEORY (DECISION-MAKING, SIMILARITY, COORDINATION, NEGOTIATIONS)

Author: KATZ, KIMBERLY FAYE

Degree: PH.D.
Year: 1996
Corporate Source/Institution: UNIVERSITY OF PENNSYLVANIA (0175)

The methods of game theory are used to discuss three **features** pertinent to numerous economic interactions. Explicitly recognizing these **features** offers new insights into many issues previously studied in economics. In Chapter 1, I study the behavior of agents confronted with a variety of different games, but who cannot fully analyze each of these games **individually**. This requires **first** defining similarity of games. Because of the fundamental relationship between similarity and decision making, the only acceptable way to do this is to use definitions generated endogenously, much in the way beliefs are held and updated by decision makers. I show that taking explicit account of similarity in this way and imposing a mild bounded rationality constraint on agents rules out certain equilibria which a repeated game framework admits. In Chapter 2, it is established that interaction requires coordination on certain behavioral standards. Typically, this coordination comes at a cost. This cost is incurred by both the individual attempting to achieve coordination and other members of society. A random matching model in which agents exchange endowments is used. Agents choose a standard of behavior, knowing that the gains from **trade** are higher if two **trading** agents have chosen the same standard. Agents preferring a particular standard are considered to be a community. It is shown that in some cases, total welfare of a minority community decreases when a **trade** barrier is lifted between it and the majority community. An example is also **offered** of a case in which, where no dominant culture exists, members of both communities may be worse off when **trade** barriers are lifted. In Chapter 3, I study the problem of modeling collective **negotiations** as two-player **bargaining** games, when the players in the **negotiating** groups have differing preferences over the outcome of the **negotiation**. I show that it is generally necessary to represent the group by a player with preferences significantly more extreme than those of a player with median preferences, even if the group makes decisions using majority rule voting. How much more extreme this representative should be depends upon the parameters of the game.

ADMINISTRATION, MANAGEMENT ; ECONOMICS, THEORY
Descriptor Codes: 0338; 0454; 0511

Marketing channel members, i.e., manufacturers and distributors, commonly **negotiate** key terms of exchange such as **prices** and margins. These **negotiations** can have a significant impact on a channel member's profit stream over the duration of the business relationship. Despite the importance of these **negotiations**, channel **negotiations** have received relatively little attention. Previous research has focused on Nash's cooperative **bargaining** model although recent advances in noncooperative game theory **offer** new opportunities for modeling and testing **negotiation** behavior. Rubinstein (1982) extended Nash's (1953) noncooperative model to a sequential strategic approach where **bargaining** occurs in discrete time and **negotiators** make **offers** and **counteroffers** with time preferences denoted by discount factors or fixed costs.

We adapt and extend a sequential strategic model (Grossman and Perry 1986) to describe **bargaining** behavior and outcomes in the context of marketing channels. The model involves a manufacturer and a distributor **negotiating** to establish the transfer **price** for a good in a one-sided incomplete information situation. The focus is on the forces that drive the two parties to **bargain** and reach an agreement on a specific **price** within a finite number of iterations. The baseline model examines how **different** levels of **manufacturer** uncertainty about distributor value (resale **price** to consumers) and opportunity cost of delay (denoted by a discount factor) influence the **bargaining** process and outcomes. The conceptual framework then empirically examines how incorporation of trust between parties, as well as opportunities for explicit communication, moderate **bargaining** behavior and outcomes. The predictions from the conceptual framework are tested in three laboratory experiments conducted in a channel **negotiation** scenario adapted from a popular pricing case study.

In general, changes in the level of manufacturer uncertainty and opportunity cost of delay influenced the **bargaining** process and outcomes as predicted by the model. A reduction in manufacturer uncertainty reduced **bargaining** duration, increased manufacturer profits, and improved **bargaining** efficiency while an increase in opportunity cost of delay lowered **bargaining** duration but did not improve **bargaining** efficiency. **Bargaining** efficiency improved as the potential gains from **trade** increased. Variations in trust and the opportunity to communicate also had a significant impact on the **bargaining** outcomes.

Parks Canada **negotiates** leases with residents and businesses located in national parks for land on which their buildings are situated. Under current leasing provisions, rent collected by Parks Canada is less than the true economic value the leases provide.

The focus of this thesis is the development of **auction** procedures to increase Parks Canada's revenue when allocating leases for the following **types** of facilities: (i) services provided by sunk capital assets; and (ii) services provided by non-sunk capital assets. For the first **type** of facility, it is suggested that an incentive contract is designed according to principal-agent model theory, and subsequently **auctioned** to the **bidders**. For the **second type** of facility, data from the **auction** of outfitter-guide allocations provides evidence of the effects of the relative economic efficiency and differential revenue-generating potential of sealed- bid versus open **auctions**.

THREE ESSAYS ON INFORMAL MARKETS (MARKET STRUCTURE, BLACK MARKETS)

Author: MEPHOKEE, CHANIN

Degree: PH.D.

Year: 1993

Corporate Source/Institution: UNIVERSITY OF KANSAS (0099)

Source: VOLUME 54/09-A OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 3548. 142 PAGES

Descriptors: ECONOMICS, THEORY

Descriptor Codes: 0511

This study is concerned with decentralized **trade** caused by the informal characterizations of market structure, especially in informal markets of developing countries. The informal markets have their own characterizations of market structure which are different from the ones in the competitive market or the monopoly market. A black market, where **trading** is illegal but goods are legal, is a good example of an informal market. The illegality forces a seller and a buyer to make a direct contact which results in a **bilateral monopoly type** of **trading**. With complete information, the **bargaining** process leads to the unique black market equilibrium **prices**. Because of the **bargaining** process, the detection risk becomes the cost per approach of the seller and it discourages a seller to stay longer in a black market. An increase in the detection risk and the availability of the official goods can reduce the equilibrium **prices** in a black market, while an increase in the controlled **price** can increase the equilibrium **prices**. Thus a government can control the **prices** in a black market through these variables. When the official market payoffs are uncertain for a buyer and a buyer can return to a black market, there exists the mixed strategy equilibrium. When the initial beliefs close to one, a buyer must randomize between accepting and rejecting the seller's **offer**. Since the agreement reaches immediately under the complete information assumption, a crucial dimension of real **bargaining** problem is missed. To solve this problem, the incomplete information model is introduced. With the monotonicity restriction, for a range of initial beliefs of a seller, the refined sequential equilibrium **price** in a black market is unique. For the initial beliefs close to one, there exists an equilibrium in mixed strategies. With **many buyers** and **sellers** in a black market, for a range of seller's initial beliefs, there exists a pooling and separating sequential equilibrium. With the initial beliefs close to one, there exists an equilibrium in mixed strategies. When the quality of products is concerned, the uncertainty in input markets and the uncertainty in the production process, which always exist in the informal markets of developing countries, are the cause of the low quality problem. The free-entry condition cannot improve the quality of products. To solve

this problem, a government may have to intervene by imposing quality control on input markets. Since there are small number of input suppliers, quality control on input quality can be successful.

PAGE 3528. 279 PAGES

Descriptors: ECONOMICS, GENERAL; POLITICAL SCIENCE, INTERNATIONAL LAW
AND RELATIONS

Descriptor Codes: 0501; 0616

While advocates of managed **trade** have often singled out the semiconductor industry as the best case for government intervention in **trade**, this analysis of the 1986 US-Japan Semiconductor **Trade** Arrangement reveals the failure of good intentions. Discussion focuses on the effects of the Arrangement on the Dynamic Random Access Memory (DRAM) market.

First, a political economy approach is employed to show that there were two key conditions to the US semiconductor industry's success in gaining **trade** protection. The first condition was an alliance between US semiconductor producers and users; protection was granted only when government did not face antagonistic **consumer** pressure. The **second** condition was pressure from Congress for protection due to a variety of reasons; this pressure motivated the executive branch to grant **trade** protection to the semiconductor industry in order to prevent broader congressional action.

Second, a three-country oligopoly model is used to analyze cyclical dumping in the DRAM industry and the effects of various methods of protection proposed during the **negotiation** of the 1986 Arrangement. Threatened US antidumping duties were rejected by **negotiating** parties in favor of price floors because this shifted rents from the US Government and third countries to Japan. However, the Japanese Government's rational response to protection was to make use of Japan's position as the dominant DRAM supplier; it mandated cuts in exports, thereby raising prices. Evidence of such behavior is presented. Higher prices destroyed the US producer-user alliance which consequently sabotaged the 1986 Arrangement.

Finally, welfare analysis is employed to estimate the short-run welfare gains and losses resulting from the effect of the 1986 Arrangement on DRAM prices. In the short run, producers gained and consumers lost in all countries. However, Japan experienced a net gain while the US, Europe and ROW each experienced a net loss. This analysis is the first comprehensive estimation of the welfare effects of the 1986 Agreement and represents one of the first efforts to calculate the welfare effects of **bilateral** agreements in third countries. Data from wide-ranging sources include previously unpublished series.

PAGE 1050. 78 PAGES

Descriptors: ECONOMICS, THEORY

Descriptor Codes: 0511

Auction theory provides a convenient means of analyzing market behavior in the presence of asymmetric information. Besides the fact that **auctions** are extensively used, they are a relatively simple market clearing mechanism and amenable to game theoretic modelling. The three essays in this volume build on the large (and still growing) body of work in this area.

Once an **auction** is held and the winner is selected, the winning bidder is contractually obligated to complete the transaction at the specified **price**. The first essay in this volume analyzes the consequences of imperfect enforcement of this contract. I show that when there is no contract enforcement, equilibrium **bidding** strategies do not exist. In addition, the weaker the enforcement, the higher the **bid**-taker's expected revenue.

Auctions generally involve individuals who have an ongoing commercial relationship. The second essay analyzes a situation in which an **auction** is the beginning of a long-term relationship between the winning bidder and the **auctioneer**. While static models of **auctions** usually predict efficient allocations, in a dynamic framework where the winning bidder and the **auctioneer** **bargain** over the **price** of a closely related good after the **auction**, I show that the allocation induced by the **auction** is not efficient.

Much of the theoretical **auction** literature implicitly assumes that there are no observable differences between the bidders of an **auction**. In the third essay of this volume, I present an asymmetric **auction** model where the distribution of a bidder's value depends on some commonly observed characteristics. I use the theory of multivariate total positivity to relate a bidder's characteristics to the distribution of his value. Using this relationship, I derive a number of qualitative results regarding the **bidding** strategies, the distributions of **bids**, the probabilities of winning, and the expected payoffs of **different bidders**. A special case of the model can be used to analyze joint **bidding** or mergers in an **auction** market. I show that the relationship between the per-member payoff of a group of individuals jointly **bidding** and the group's size differs depending on the **type** of **auction**.

ON THE CONSEQUENCES OF RECENT CHANGES IN THE GLOBAL TRADING ENVIRONMENT (TRADE PATTERNS, PREFERENTIAL TRADING , CUSTOMS UNIONS)

Bode Akintola01-Oct-03

Author: HAVEMAN, JON DAVID
Degree: PH.D.
Year: 1992
Corporate Source/Institution: THE UNIVERSITY OF MICHIGAN (0127)
Chairperson: ALAN V. DEARDORFF
Source: VOLUME 53/10-A OF DISSERTATION ABSTRACTS INTERNATIONAL.
PAGE 3609. 155 PAGES
Descriptors: ECONOMICS, GENERAL; ECONOMICS, LABOR; ECONOMICS, THEORY
Descriptor Codes: 0501; 0510; 0511

This study investigates some of the welfare consequences of two particular changes in the global **trading** environment: first, a dramatic shift in **trade** patterns, and second, an apparent shift in the regime surrounding **trade** liberalizing **negotiations** away from the **multilateral** arena toward preferential **trading** arrangements.

The first two essays utilize microdata to analyze the effects of the recent surge in international **trade**. Specifically, the analysis is focused on displaced workers, **individuals** involuntarily **separated** from their industry of employment. The first essay develops a general equilibrium model of the relationship between changing **trade** patterns and displacements. It then proceeds to estimate, econometrically, the effect of changing competitiveness, measured as changes in import and export prices, on the level of displacements by industry. It is found that changes in international competitiveness were detrimental to domestic industries in the early 1980s, but were in general small and beneficial in the late 1980s.

The second essay provides a detailed analysis of the postdisplacement experiences of workers displaced from expanding **traded** industries, from declining **traded** industries and from nontraded industries. The postdisplacement experience is characterized by the duration of the spell of unemployment and the difference between the pre- and postdisplacement wages. The results of the analysis provide evidence that individuals displaced from declining **traded** industries suffer longer spells of unemployment and a larger decline in wages than do all other displaced workers.

The final essay deals with an issue of increasing importance in a world where preferential **trading** arrangements are the call of the day: the effects on world welfare of sequential customs union formation. A computational model of customs union formation is developed and simulated under a variety of assumptions. These assumptions concern various characteristics of the world, the pattern of customs union formation, and GATT restrictions on the subsequent common external tariff. The results show that unrestricted customs union formation is likely to result in successive deterioration of world welfare. An examination of the current GATT guidelines, however, reveals that if they were more vigorously enforced, the deleterious effects of customs union formation could be eliminated.

THE EFFECT OF INTRINSIC, EXTRINSIC CUES AND REFERENCE PRICES ON BUYERS' PERCEPTIONS OF QUALITY AND VALUE (INTRINSIC CUES)

Author: GREWAL, DHRUV
Degree: PH.D.

Descriptor Codes: 0338

This dissertation research synthesizes knowledge from consumer behavior, psychology and applied economics to address a fundamental issue in marketing regarding how buyers evaluate products. Classical economic theory has assumed that buyers have perfect information about products and **prices** and that buyers are capable of processing this information. However, in reality, buyers face an increasingly complex marketplace with numerous products, incomplete and imperfect information, and a limited capability of processing this information. Hence, this complex marketplace creates an uncertain environment in which buyers have to make purchase decisions. To reduce uncertainty buyers tend to use available information cues to make inferences about the products being evaluated. Among these cues are the product's **price**, reference **price** (e.g., **price** last paid, advertised reference **price**), and certain **attributes** intrinsic to the product.

The research question addressed in this dissertation is, "how do information cues affect buyers' product evaluations, behavioral intentions and **price** estimates?"

Conceptually, this research develops a model incorporating the research objectives by describing how buyers select specific information cues, evaluate them, and arrive at an overall assessment of the value or worth of the product to them. Specifically, the model proposes that the **price** cue is used both as an indicator of product quality as well as an indicator of monetary sacrifice. It is proposed that buyers initially **trade** -off these opposite indicators to make an assessment of the value of acquiring the product. However, complicating this model is the notion that some product **attributes** produce benefits quite apart from quality, and that some **price offers** represent a short-term deal or **bargain**. Since buyers are assumed to have an internal reference **price** that may be used to evaluate a **price offer**, additional value, called transaction value, may be perceived if the **offer price** is below this reference **price**. Further, additional value may occur because, intrinsic **attributes** of the produce may provide additional benefits. Furthermore, the model conceptualizes that the perceived value of the **offer** has a positive effect on buyers purchase intentions and the greater the transaction value, the less their search intention for a lower **price**. The model proposes specific linkages between these variables and suggests a process of how **buyers** evaluate product **alternatives**. (Abstract shortened with permission of author.)

STRATEGIC INTERACTION IN DYNAMIC TRADING GAMES: THREE ESSAYS
Author: VINCENT, DANIEL ROBERT
Degree: PH.D
Year: 1988
Corporate Source/Institution: PRINCETON UNIVERSITY (0181)
Source: VOLUME 49/04-A OF DISSERTATION ABSTRACTS INTERNATIONAL.
PAGE 0914. 109 PAGES
Descriptors: ECONOMICS, THEORY

Descriptor Codes: 0511

These essays analyze strategic behaviour in dynamic **trading** games. The first and the last essays examine games of incomplete information. A seller of a single indivisible good has private information about the quality of the good--the information affects both his valuation of the object and the valuation of potential purchasers. Chapter One extends results on **bargaining** games with incomplete information to this framework. It characterizes the unique perfect Bayesian equilibrium of the game in which only the uninformed buyer makes **offers** and shows that, unlike models in which the buyer's valuation is common knowledge, a significant probability of significant delay must typically occur in these games before **trade** can take place. It also illustrates that equilibrium behaviour can involve no **trade** even when it is common knowledge that gains from **trade** exist.

The second paper studies sequential **offer** games when there is complete information but there are **many** potential **buyers** for an object. It shows that for a broad class of infinite horizon games, a single seller may not be able to take advantage of competitive behaviour on the part of his purchasers to extract most of the surplus. The seller can extract all the surplus if he is able to restrict the information each buyer has about the behaviour of his rival.

The third paper uses the results of the second essay to examine the effects of competition in the model described in the first paper. Again, uncertainty about the quality of the object is present. In this environment, though, two uninformed buyers attempt to purchase the good in a finite period, simultaneous **offer** game. The set of perfect sequential equilibria of this game are characterized. Although in these games, buyers compete away all their surplus, an example illustrates that an informed seller may often wish to face only one buyer instead of two. These results suggest the presence of incentives to develop alternative **types** of **trading** institutions.

RESIDENTIAL REAL ESTATE BROKERAGE COMMISSION STRUCTURE AND A SURVEY OF HOME SELLERS ' PERCEPTIONS OF ALTERNATIVE FEE SCHEDULES OR COMPENSATION PLANS

Author: WOODWARD, LYNN NEVILLE

Degree: PH.D.

Year: 1980

Corporate Source/Institution: THE UNIVERSITY OF WISCONSIN - MADISON (0262)

Source: VOLUME 41/09-A OF DISSERTATION ABSTRACTS INTERNATIONAL.
PAGE 4097. 371 PAGES

Descriptors: BUSINESS ADMINISTRATION

Descriptor Codes: 0310

The goal of this investigation is to aid the residential real estate broker to decide the amount and **type** of fees to charge for his services. The purpose is to study the structure of the residential real estate brokerage industry, the significance of the sales commission, and the fee recommendations in the brokerage literature through a literature review. The additional purpose is to explore through a survey of homesellers, the source of dissatisfaction and possible alternatives to the present system of charging for brokerage services.

The significance of studying sales commissions is not only the

controversy between the differing views of the public and brokers, but involves antitrust action, a FTC investigation of brokerage practices, and an upcoming report to Congress by HUD required by RESPA. Justice Department action against local real estate boards in the period 1950 to 1974 eliminated recommended fee schedules by **trade** organizations. Individual firms must now decide the fee or commission which would best serve the firm and its clients, the homeseller.

The literature review documents the structure of brokerage industry and the causes for a firm's success and failure. The present sales commission tends to be five to seven percent of the homes selling **price** payable by the homeseller at closing of the transaction. Brokers become the primary source of market information by **offering** a free service to home buyers. The literature, most written before antitrust, recommends customary commissions, board rates (now illegal), and a listing agreement clause stating the commission as % of the selling **price**. Future literature should recommend a more openly structured commission clause and reflect availability of alternative commission plans. Commissions should not be discussed among brokers (except in writing for specific transactions), at **trade** association meetings, or with salespeople except as a management decision. The multiple listing cooperative agreement should only state the percentage that the selling broker will receive.

The judgemental sample of 251 closings represents homesellers who sold through a real estate broker in the Wichita SMSA during the summer of 1976. Total response rate was 42.9%; 100 questionnaires returned had 75 items about homesellers' perception of sales commissions. The hypothesis asked if the homeseller agreed that the broker's compensation should be based on an alternative as well as the percentage commission. Substantial agreement (a decision rule was set at 33 1/3%) was received for compensation being based on: the complexity or simplicity of the transaction (69.5%), **negotiation** between the broker and the seller (64.6%), commission on the sales **price** (65.3%), time in days the home takes to sell (60.8%), **negotiated** flat fee (55.8%), a la carte fees for only those services needed to complete the sale by the homeseller (48.4%), and a refundable fee in advance (43.8%). A certified listing, the home is sold for the **price** set by an independent fee appraisal, received 40.8% agreement.

The unhappy group of homesellers--who thought commissions were too high, agent's service unfavorable, or would not use a broker again--were younger, higher educated, did not perceive the functions of the broker/agent differently, and tended to have sold their homes quickly, within two or six weeks. The unhappy group had more agreement with alternative plans, ranked commission based on selling **price** lower, and agreed with a net proceeds over set **price** (net listing--illegal in most states) compensation.

The amount of fees averaged \$2593 or 6% commission. A daily fee for each day the home took to sell was higher but the respondents did not agree with that method of compensation. A fair commission averaged five percent. A flat fee was about half the commission rate equivalent. No other alternative in amount was as high.

This was an exploratory study and a more generously financed research should find out more about the relationship between the alternatives and the level of dissatisfaction. An individual firm deciding to implement an alternative plan should do local market research. Future research should test the success of For-Sale-by-Owner and other alternative plan brokers, improve the availability of cost accounting information to aid in commission decisions, and research management practices of brokers and the efficiency of salespeople.

No change in sales commissions is likely without a study and implementation of alternative salesagent compensation plans from the present straight commission split between broker and agent.

SYDAFRIKA LATER SAAB VANTA PA BESKED

SOUTH AFRICA: **NEGOTIATIONS** ABOUT JAS DRAG ON

Dagens Industri (DI) 27 May 1999 p.22

Language: SWEDISH

The final **negotiations** about South Africa's purchase of the Swedish fighter aircraft JAS 39 Gripen takes longer time than anticipated. The settlement was expected to be reached before 1 July this year, but, according to South Africa's chief **negotiator** Jayendra Naidoo, a couple of months' further **negotiations** are required before an agreement can be reached. Issues such as financing, delivery date and payment date have not yet been **negotiated**. Moreover, countertrade projects have not yet been decided. Mr. Naidoo says South Africa will follow usual praxis, which, according to the paper, includes a bank guarantee corresponding to 5% of purchase **price**. This would mean the supplier Saab would have to **offer** about a SEK 750mn (USD 90mn) guarantee. Mr. Naidoo says South Africa still have the possibility of choosing **another supplier** if requirements are not met.

Fleet car discounts prevent private buyers driving hard **bargain**
UK: DISCOUNTS **OFFERED** TO FLEET CAR BUYERS
Financial Times (FT) 09 Mar 1999 p.16
Language: ENGLISH

It has been announced that 60% of all new car registrations during the first two months of 1999 were for fleet cars, an increase from the 54% recorded during the same period in 1998. The Society of Motor Manufacturers and Traders has revealed that fleet car buyers are **offered** discounts of around 30% on all the cars they buy, to the detriment of private buyers. Private car buyers are loosing out to fleet car buyers in a number of ways. Firstly manufacturers force up list **prices** for private buyers in order to help cover fleet discounts, secondly private buyers are usually only **offered** a small discount on the list **price** of around 0.5%-5%, and thirdly the **trade** in value of the car is dramatically reduced due to the volume of similar models that are repurchased from fleets. Manufactures defend their action by saying that most **retailers** in **different** sectors **offer** discounts for bulk purchases. They also point out that private buyers reap other benefits not available to fleets such as no-interest financing and free insurance.

GRADE: Product Analysis, No Rating

In the past, business-to-business (B2B) commerce usually combined fixed **prices** and **bargaining**. Electronic commerce could make **bidding** and **bargaining** more important, but buyers can only benefit from the trend if the information available about for-sale products is current. In addition, there will always be those businesspeople who abhor **bargaining**. The advantages of fixed **prices** include the fact that **features** can determine pricing, and less anxiety for buyers. The online marketplace gives the consumer more choices and ways to purchase. For instance, rumor has it that Alan Greenspan, Chair of the Federal Reserve Board, chose to purchase a video-cassette recorder in a store that charged more than a vendor the chairman had found online; Greenspan said the purchase was not worth **haggling** over. This story points out that just about everyone surfs the Web for product information; purchasing decisions depend on multiple factors, only one of which is **price**; and that online buying could mean the end of fixed **prices**. **Many** sites allow **users** to **bargain** for the **prices** of goods and services, including ChemConnect and CheMatch, which created real-time **trading** systems for buyers and sellers. Electronic communication networks for buying and selling stocks may be the most well-publicized markets to grow from Internet technology. In the future,

say analysts, metamediaries may emerge in which multivendor, multiproduct marketplaces will be available that provide more services, including procurement management, quality assurance, fulfillment, and payment settlement.

GRADE: Product Analysis, No Rating

Web-based trading communities are growing in popularity for materials procurement, with approximately 300 or more business-to-business (B2B) trading communities operating online, including those for the plastics, steel, chemical, electronic components, transportation services, and paper industries. According to analysts, the market for B2B transactions will rise from \$43 billion in 1998 to over \$800 billion in 2002. Many trading communities are run by third parties with many years of experience in a specific industry. The Web trading communities provide a mixture of targeted content and services, as well as marketplace abilities that permit manufacturers to purchase more efficiently from multiple suppliers. Many communities charge a percentage of the transaction value as a fee. Among models used are auction pricing, spot buying, catalog-based purchasing, and bringing together of buyers and sellers who then negotiate offline. All these models can easily increase the number of suppliers available to manufacturers and can reduce costs. Sellers get new marketing and distribution channels, and customer service is enhanced. More complete information is available, and order/fulfillment is automated. The market host establishes value-added feature sets, and increases service levels to current customers, while providing access to more information and suppliers. Buyers have lower initial expenses and risks and obtain access to secondary and excess supply auctions.

A discussion of online **bidding** and dynamic pricing activities looks at the Web as a 'dynamic marketplace in which **prices** are more fluid than ever.' Online **bidding** continues to expand and become more popular, as shown by the broad-based success of companies such as eBay and **Priceline**.com. Buyers and sellers can **haggle** over all **types** of consumer, business, farming, and industrial equipment and supplies. A spokesperson for Visteon, the parts subsidiary of Ford Motor Company, says the firm held a reverse **auction** to source \$150 million in circuit boards and other automotive parts. Visteon plans to solicit **bids** from suppliers for an additional \$350 million in multi-year contracts. Dave Vent, CIO of Visteon, explains that **bargaining** with **multiple suppliers** can take months, but the same tasks can be done via the Internet in just hours. Analysts expect online **bidding** to become as universally used as stock quotes and free e-mail, and it should significantly change the way in which products move through the supply chain. Buyers and sellers interface directly and more often to determine the worth of an item at a specific point in time. Two forms of online **bidding** are described: **auctions** and exchanges.

A discussion of online **auctions** emphasizes their potential for fun and good values, as long as attendees keep good sense. They should keep in mind

that 'online **auctioneers** play by their own rules. And for some that means there aren't any.' For instance, a top-10 list of frequently reported Internet frauds puts incidents related to Web **auctions** at the top of the list. Online **auction** shoppers should read notices of sites' policies and rules of participation, which are generally posted on the sites. These disclosures often are worded to limit the liability of the **auction** regarding function or fit of products sold. Such conditions do not leave successful bidders with much recourse if they are disappointed. Buyers also should not expect a warranty unless one is stipulated, and they should make every attempt to verify condition or content of products before **bidding** . Several sites provide technical support services for this purpose in advance of the start of **bidding** . Users who follow this advice and stick to a common sense approach throughout can get **bargains** at online **auctions** . Among **many** other factors, **bidders** should keep in mind what other bidders may be willing to pay, and this ability involves strategies that are hard to define. Some bidders only **bid** at the last minute, while others start early and guard their positions. One consumer says he 'consistently see(s) items go for more than their retail **price** ,' but when certain precautions are observed, this does not have to happen.

Shopbots, which are intelligent agents that search for information online and automatically deliver it to the desktop over a network, can also automatically comparison-shop on the Web. Among bots available are Excite's ProductFinder, Inktomi's C2B, Amazon.com's Shop the eWeb, MySimon, Yahoo! Shopping, **BargainFinder** , Microsoft Bookfinder, **PriceWatch** , BottomDollar, and ComputerShopper from Ziff Davis Publishing. Although shopping agents have been touted as possible business-to-business tools, especially for commodity items, companies do not use them. Agent technology is, however, popular for consumer shopping on the Web. Some analysts say shopbots fall into three separate categories: Product brokers, which recommend products based on past choices or parameters stipulated by the buyer; merchant brokers, which gather **price** and availability information; and **negotiating** shopbots, which buy, sell, and **bargain** with other bots, based on **user** set parameters. **Many** **auctions** fall into the last category. New technologies include the Alexa navigation service, which operates with a browser to provide added information about the site being

viewed and to **offer** recommendations for other sites of interest. Shopbots can really help in finding the lowest **prices** for products, but not all online merchant like them or think they are good for e-commerce.

eBay's namesake **auction** site, Classified Ventures' **Auction Universe**, Excite@Home's **Excite Auctions**, Yahoo!'s **Yahoo! Auction**, and Egghead.com's **Surplus Auction** are among many highlighted online **auction** sites. Two **types** of online **auctions** exist: One **type**, the merchant **auction**, is run by one vendor and the other is a gathering place for **many different sellers**. In a merchant **auction**, goods come from manufacturers and are often outdated models being sold off at low cost. Examples of single-merchant **auction** sites are **First Auction**, **SurplusAuction**, **U-bid**, **Webauction**, **Onsale**, **Quixell**, **Dealdeal**. **eBay**, **Auction Universe**, **Excite Auctions**, and **Yahoo! Auctions** allows buyers and sellers to get together online. To find **auctions** of all **types**, users can link to **Lycos**; **AuctionConnect**, which searches other merchant **auctions** for particular items, and then notifies **users**. **First Auction** is an affiliate of the Internet Shopping Network, and provides items left over from Home Shopping Network. **SurplusAuction** begins **bidding** at a dollar for many computing components; recently **bidding** for a 266MHz Pentium laptop PC began at a dollar. **U-bid** also has great computing **bargains**, and **WebAuction** provides its own site and catalogs. **Onsale** is the **auction** branch of the vendor of the same name, while **Quixell** is a German online **retailer** that **auctions** **many** wares. **Dealdeal** **offers** mostly computer equipment, and has **bargains** on optical and e-toys.

A discussion of online auctions highlights many auction sites on the Web, including those selling general merchandise and those that fund charities. One site owner states that surfers who attend online auctions are attracted to and looking for bargains. Business-to-business auctions are large revenue producers, and allow companies with an oversupply of industrial commodities or companies needing, for example, many cheap computers quickly to respectively unload their inventory and obtain what they need. Many computer and consumer electronics products are sold at online auctions, and at eBay, users can trade 24 hours a day. About 1.3 million users have registered with eBay, which has more than a million items for sale. GivetoCharity is a worldwide, secure online donation service for nonprofit organizations, and promotes easy access for those who wish to donate online to a favorite charity. WebCharity's goal is to assist charities in profiting from the quickly expanding popularity of Internet auctions and the expansiveness of World Wide Web philanthropists. Internet auctions can last anywhere from an hour to a week, and have differing formats. For instance, Klik-Klok's Online Dutch Auction offers items at a high price while the clock ticks and the items' prices drop until someone buys something. Yankee auctions are more common: a few identical items at a high price are offered for sale concurrently, and the highest bidders get the goods at the close of the auction.

Graphic designers have many online options to access stock photography. Many companies **offer** artwork via modem, including Comstock, whose OnLine Access photography service lets designers download any of their 15,000 low-resolution images. **Users first** look through the Comstock catalog, **negotiate** a usage fee, and then receive overnight delivery of the high-resolution image. Eastman Kodak's Kodak Picture Exchange **offers** more than 100,000 photographs that can be searched and downloaded online. Again, the high-resolution version arrives via overnight delivery, either on a Photo CD or transparency. Picture Network International's Seymour online service **offers** over 250,000 images from 33 providers, including the Chicago Historical Society, and Christie's **auction** house. The database can be searched online, and images can be ordered and **priced** online. Users can download the high-resolution versions.
